The inherent specificity and electrochemical reversibility of enzymes poise them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators or tedious biofunctionalization approaches.

### **Direct metabolite detection with an n-type accumulation**

Fusion power is a theoretical form of power generation in which energy will be generated by using nuclear fusion reactions to produce heat for electricity generation. In a fusion process, two lighter atomic nuclei combine to form a heavier nucleus, and at the same time, they release energy. This is the same process that powers stars like our Sun. Devices designed to harness this energy are ...

### **Fusion power - Wikipedia**

Advances in Materials Science and Engineering (ISSN : 2578-7217) provides a forum for publishing papers with in-depth understanding of extraction, synthesis, processing, structure, properties, and performance of materials that enable an engineering function.. This journal also emphasize applications of Materials in electronics, communications, medicine, transportation, manufacturing, recreation ...
