3. Prioritizing Requirements. New requirements, including defects identified as part of your user testing activities, are prioritized by your project stakeholders and added to the stack in the appropriate place. Your project stakeholders have the right to define new requirements, change their minds about existing requirements, and even reprioritize requirements as they see fit.

In software development and product management, a user story is an informal, natural language description of one or more features of a software system. User stories are often written from the perspective of an end user or user of a system. They are often recorded on index cards, on Post-it notes, or in project management software. Depending on the project, user stories may be written by various ...

We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value: Individuals and interactions over processes and tools Working software over comprehensive documentation Customer collaboration over contract negotiation Responding to change over following a plan. That is, while there is value in the items on

1. Find a partner. 2. Start telling them about yourself. 3. When they hear something you both have in common, they will say "Me Too!" and find a new partner.

User Stories – The Art of Writing Agile Requirements

A common challenge with writing user stories is how to handle a product's non-functional requirements. These are requirements that are not about specific functionality ("As a user of a word processor, I want to insert a table into my document."), but are rather about an attribute or characteristic of the system.
