The abundance of the chemical elements is a measure of the occurrence of the chemical elements relative to all other elements in a given environment. Abundance is measured in one of three ways: by the mass-fraction (the same as weight fraction); by the mole-fraction (fraction of atoms by numerical count, or sometimes fraction of molecules in gases); or by the volume-fraction.

This is a list of the 118 chemical elements which have been identified as of December 2018. A chemical element, often simply called an element, is a species of atoms which all have the same number of protons in their atomic nuclei (i.e. the same atomic number, or Z).. Perhaps the most popular visualization of all 118 elements is the periodic table of the elements, a convenient tabular ...
