Technologies that use micro-LEDs offer the potential for significantly increased luminance and efficiency, unlocking new possibilities in high dynamic range, augmented/ mixed reality, projection, and non-display light-engine applications.

LEDs are ideal for use in applications that are subject to frequent on-off cycling, unlike fluorescent lamps that burn out more quickly when cycled frequently, or High Intensity Discharge (HID) lamps that require a long time before restarting.

Liquid crystal display technology has enjoyed significant advances in just a few short years. The quality of LCD panels has improved dramatically while at the same time costs have gradually come down.

### **Fundamentals of Liquid Crystal Displays – How They Work**

LCDs display characters in pre-designated blocks and the LCD screen and this limits their use to simple number and character displays and crude images drawn from numbers or characters (a bouncing ball using the character "o" or other such graphical techniques
